DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1, 2, 6, 7 and 9-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Mangum.

There is disclosed in Mangum a device for draining a can of food, comprising: a longitudinal first member having proximate and distal ends; means 17 for retaining a can of food attached to the proximate end of the first member; a longitudinal second member having proximate and distal ends, the second member pivoting about a pivot axis 4 with respect to the first member at the proximate end; a grate 9 for retaining a foodstuff in the can; openings within the grate for draining a fluid from the foodstuff, the grate being attached to a distal end of a third member 7 which is pivotally attached to the second member.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1761

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mangum in view of Zammit.

Mangum discloses all of the claimed subject matter except a cylinder for retaining a can of food.

Zammit discloses a device for draining a can of food which uses a cylinder (receptacle) 13 for retaining the can before draining. It would have been obvious to one skilled in the art to substitute the retaining means of Mangum with that taught by Zammit, in order to improve the security of the can within the device during its use.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mangum.

While Mangum fails to disclose a plurality of parallel spaced apart ridges on the grate, it does disclose ridges which are perpendicular to each other. In regards to the pattern of the ridges on the grate, it would have been an obvious matter of design choice to use perpendicular ridges, since applicant has not disclosed that parallel ridges solve any stated problem or are for any particular purpose not obtainable by the use of perpendicular ridges, and it appears that the invention would perform equally well with the perpendicular ridges.

Allowable Subject Matter

Claims 4 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 1761

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patent to Engelhardt is cited for its disclosure of a perforated pressing member and cylindrical retaining member.
